Welcome Message and Scientific Rationale

Dear colleagues and friends

after the successful edition held last January in Monza, I would like to invite you to meet once again to share and deepen together that inescapable pathway that all those who wish to become good or excellent surgeons in the reconstruction of pelvic floor pathology must take.

We will do this path with the 'masterclass' formula, i.e. relatively short meetings dedicated specifically and exclusively to topics well catalogued in the pelvic surgeon's training pathway: from anatomy to reconstructive surgery.

The topics of the first masterclass were related to the pathology of the central and anterior genitourinary segment; this second edition will be dedicated to the apical and posterior vaginal side, to urinary incontinence, and to the diagnosis and treatment of vesical and rectal fistulous lesions and 4th degree lacerations in childbirth complications.

In short, 2025 could be an interesting and generous year that will offer a lot of educational material to all those who want to implement their clinical skills in pelvic floor pathology and its reconstructive surgery.

How will we do this together? By starting with anatomy, especially functional anatomy, which is the basis for reconstructive surgery strategies.

We will learn about the complications of our surgical choices, whether towards fascial rather than prosthetic surgery, and we will learn how to prevent complications and how to repair them.

So welcome, and good work to all!

Rodolfo Milani
